DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

Lempel (US-5796434) discloses obtaining digital coefficient information representing pixel information of a first frame in a first format; (See Lempel figure 5 item 106A) and determining a motion vector representing the difference between a first frame in a second format and a second frame in the second format based on the digital coefficient information, wherein the first frame in the second format corresponds to the first frame in the first format . (See Lempel figure 5 item 250, note that the DCT coefficients are used to produce a motion vector, the end result of the method is taught in column 17 lines 4- 11. For a detailed explanation of how he derives his vectors using the coefficients see columns 15 and 16 explaining the steps illustrated in figure 6). However, Lempel fails to disclose the particulars of the motion vector calculation as claimed by Chang. A further search was conducted which failed to yield any prior art. Therefore, the prior art fails to teach or render obvious these limitations taken within the others in the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
